

ADIRONDACK CENTER *for* LOON CONSERVATION

2021 NEW YORK LOON CENSUS RESULTS

“The Loon Census-one of my favorite activities of the summer. On this very rainy day we were blessed by one hour of calm and no rain, observing five beautiful adult loons quietly enjoying the lake! Love it!”

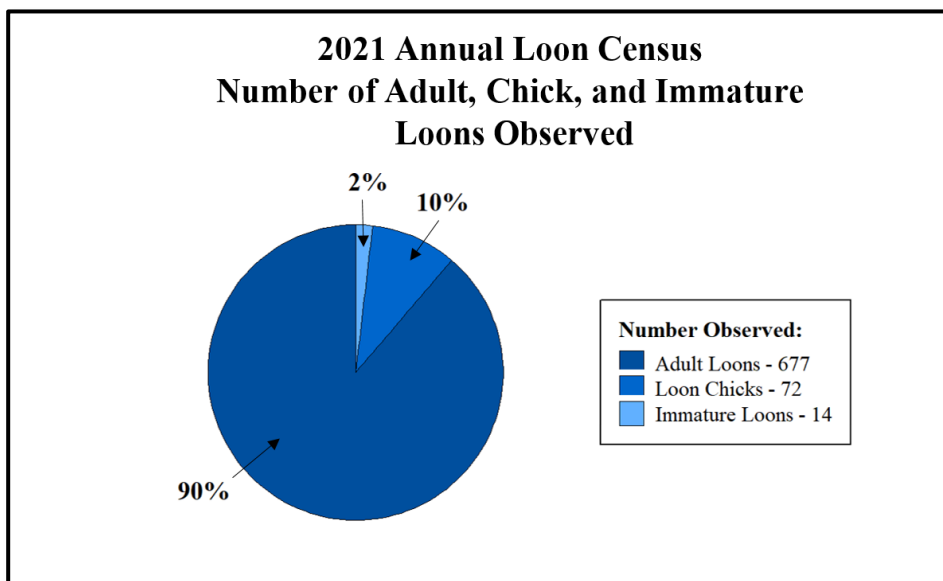

~Paradox Lake

On Saturday, July 17, 2021, approximately 515 observers participated in the 21st Annual New York Loon Census looking for loons on 223 New York lakes, ponds, and rivers. These dedicated volunteers sent in 273 reports summarizing their observations, 8 of which were not included in the analysis because the observations were conducted outside the Census hour or were duplicate reports on a lake. Thus, 265 reports were included in the 2021 Loon Census analysis.

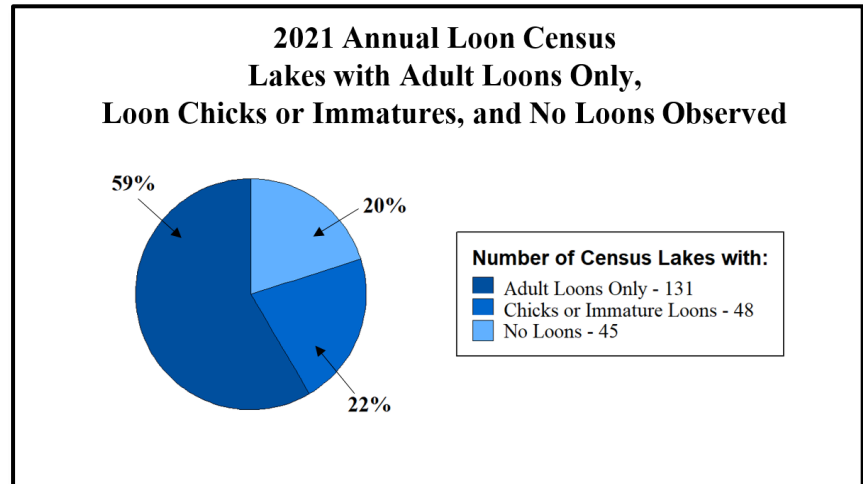

“My last view was of the female with a chick deep in the north bay of Nine Corner Lake, near pickerelweed. This bay may have been her nursery area. The chick seemed vigorous, flapping its stubby wings like its mom would.”

~Nine Corner Lake

A total of 763 loons were observed on 178 (80%) of the 2021 Census lakes, which included 677 (90%) adults, 72 (10%) chicks, and 14 (2%) immature loons.

Adult loons without young were observed on 131 (59%) of the Census lakes, while chicks or immature loons were observed on 48 (22%) of the Census lakes. No loons were observed on 45 (20%) of the Census lakes.

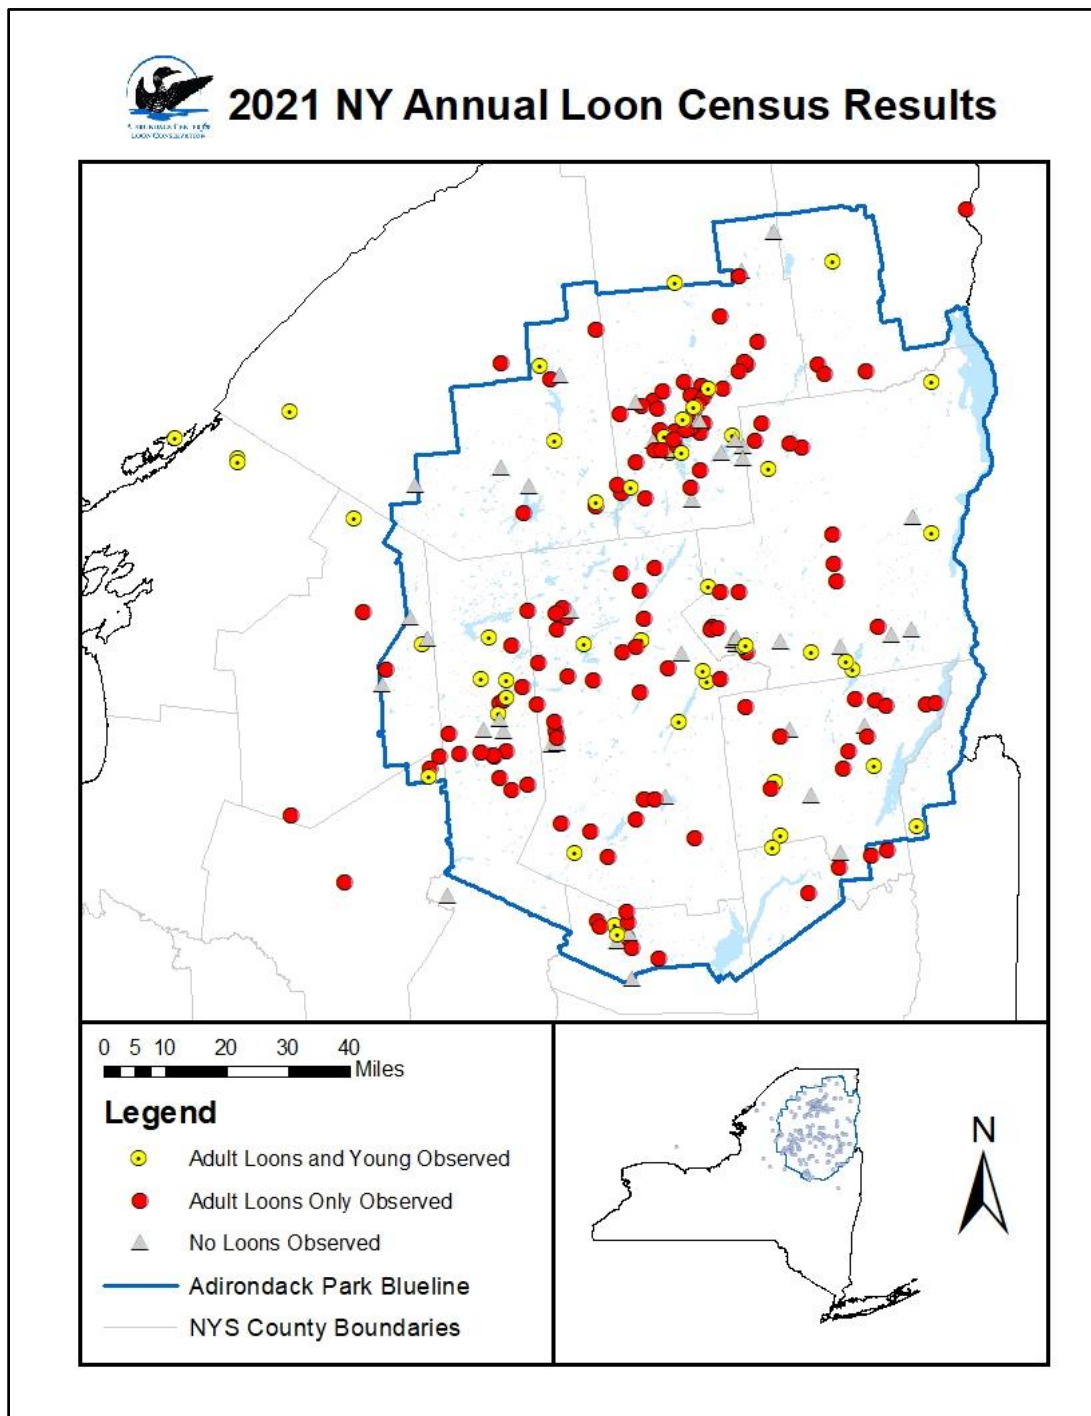

The Annual Loon Census provides valuable information about the status and trends in New York’s summer loon population, enabling the NYS Dept. of Environmental Conservation to better manage the population of these captivating birds who breed throughout New York.

The Adirondack Center for Loon Conservation is most grateful to the many Census observers who volunteer their time to observe and document loons on Census day.

Thank You!

The 2021 New York Loon Census Map shows the locations and results for the 2021 Census lakes and ponds. The results for each lake for all years it has been observed can also be viewed at www.adkloon.org/ny-annual-loon-census-results.
