

ADIRONDACK CENTER *for* LOON CONSERVATION 2022 NEW YORK LOON CENSUS RESULTS

“Beautiful morning on the water - very calm and still. So exciting to see the pair with a chick this year!”

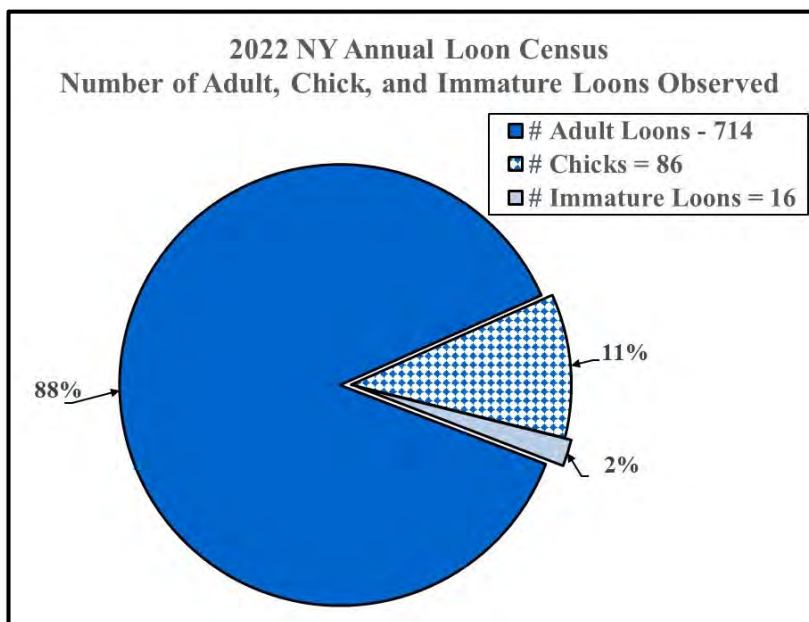

~Buck Pond

On Saturday, July 16, 2022, almost 600 observers participated in the 22st Annual New York Loon Census looking for loons on 253 New York lakes, ponds, and rivers. Our dedicated Census observers sent in 316 reports. However, 15 of the reports were not included in this analysis because the observations were conducted outside the Census hour or were duplicate reports on a lake. Thus, 301 reports were included in the 2022 Loon Census analysis.

“Big deal: nesting pair on eastern end of lake. First time in many years since it is very busy and inhabited lake!”

~Fourth Lake – Fulton Chain

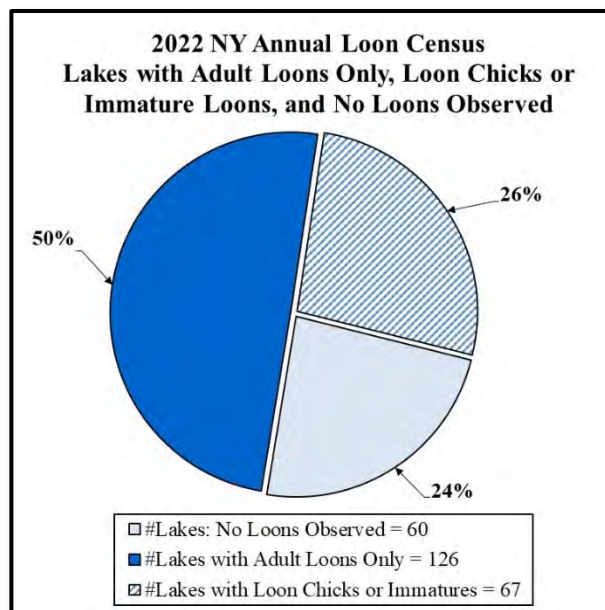

A total of 816 loons were observed on 193 (79%) of the 2022 NY Loon Census lakes, which included 714 (87%) adults, 86 (11%) chicks, and 16 (2%) immature loons.

Adult loons without young were observed on 126 (50%) of the 253 Census lakes, while chicks or immature loons were observed on 67 (26%) of the Census lakes. No loons were observed on 60 (24%) of the Census lakes.

The results of the NY Annual Loon Census provide essential information about the status and trends in New York's summer loon population. This community science study enables the NYS Dept. of Environmental Conservation to better manage the population of these fascinating birds who call New York waterways their home during the breeding season.

“Sadly, there were no loons on East Pine Pond this morning. If they had come, they would have been happy because the fish were jumping.”

~East Pine Pond

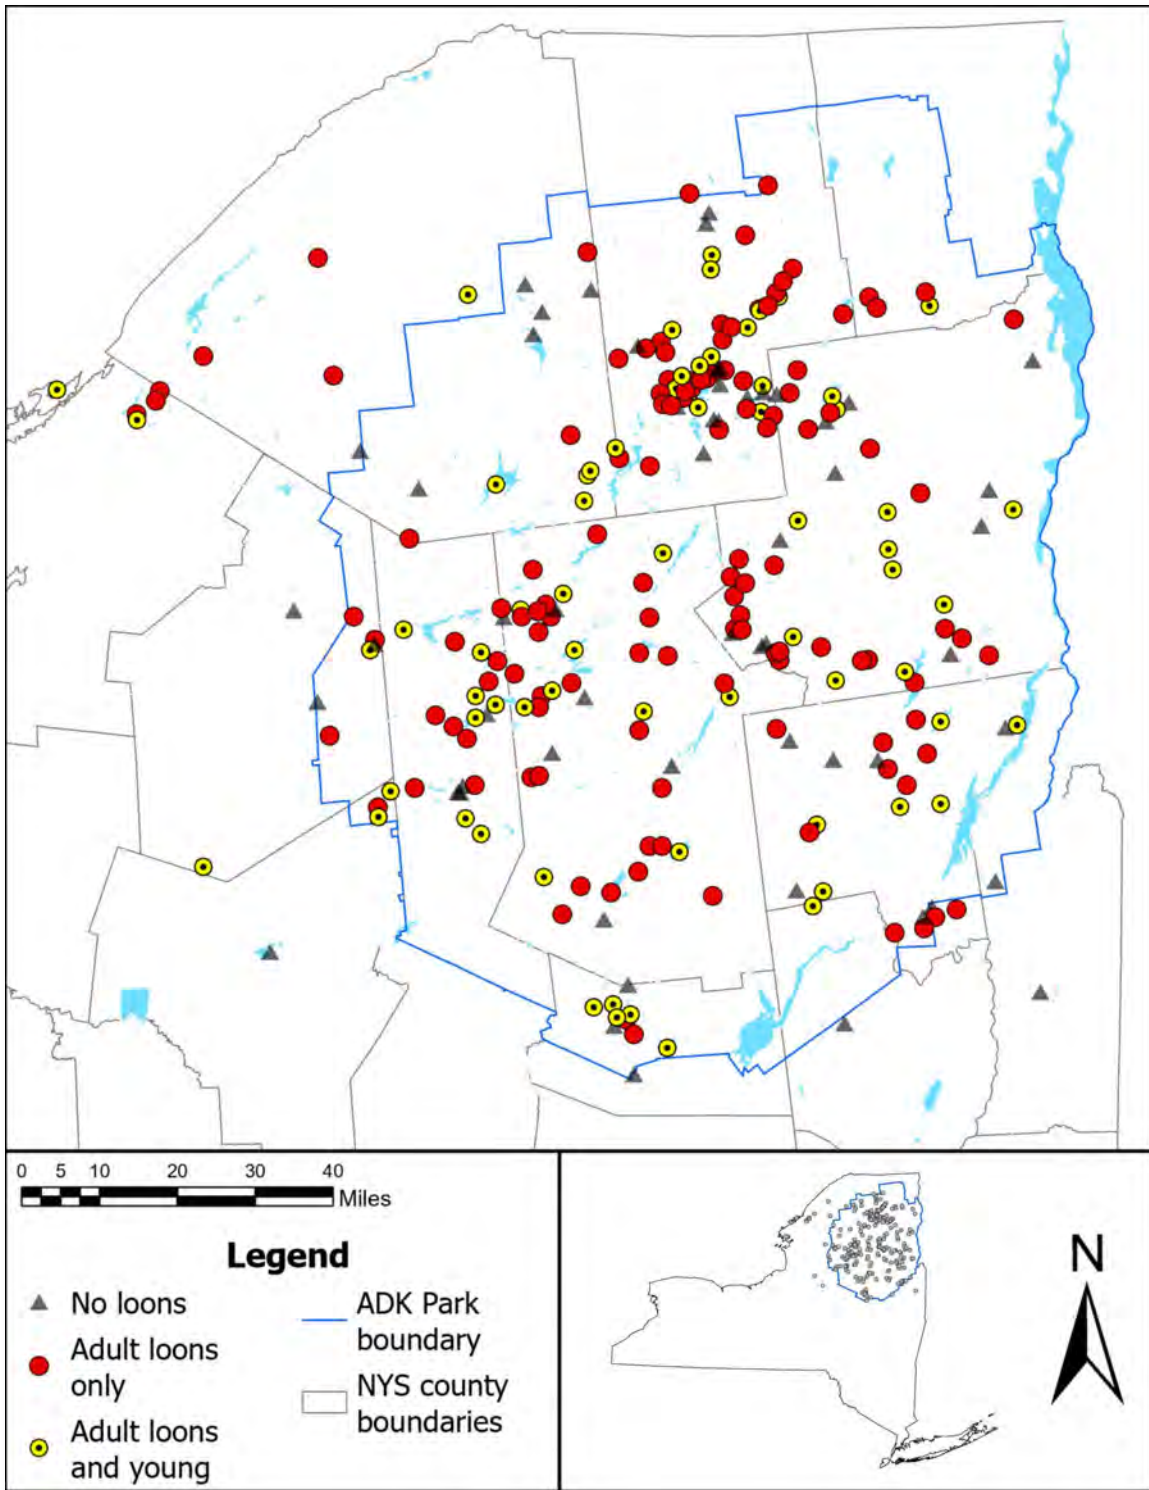

The Adirondack Center for Loon Conservation is most grateful to the many Census observers who volunteer their time to observe and document loons on the morning of the NY Loon Census.

Thank You!

The 2022 New York Loon Census Map shows the locations and results for the 2022 Census lakes and ponds.
